SITUATION SUMMARY

Petroleum Sheen, Moss Landing, Monterey County, SPILL 15-5694 (New/Final)

On 09/28/15 at 1205 hours, a National Response Center (NRC) report filed by USCG Station Monterey advised a 1 mile long sheen was discovered at 1138 hours coming from the banks at Elkhorn Slough in Moss Landing, Monterey County, due to high tides.

- Per USCG Sector San Francisco, the Harbor Master advised this was due to the Supermoon lunar tide. CA DFW is checking out the sheen and sending pictures to USCG to see if any action needs to be taken.
- At 1241 hours, OSPR advised DFW staff on scene confirmed petroleum sheen, still searching for source. In addition, sea otter scientific staff from DFW Santa Cruz lab were enroute.
- Per USCG at 1750 hours: In conjunction with the Harbormaster and DFW, after investigation the sheen is believed to be diesel and appears to be a residual of a previous release. The sheen is unrecoverable and will be allowed to dissipate naturally. They continue to monitor the area for any other sheen activity as a precaution.

Potential Petroleum Release, Santa Barbara, Santa Barbara County, SPILL 15-5700 (New/Final)

On 09/28/15 at 1353 hours, a NRC report filed by USCG Marine Safety Detachment (MSD) Santa Barbara advised of a potential release in Santa Barbara County on Mariposa Reina Beach due to a 30' vessel ran aground. The vessel is carrying 200 gallons of gasoline in barrels, but there has been no release of gasoline. There are multiple agencies on scene and the USCG will be conducting operations to remove the fuel from the vessel.

- Cal OES SDO advised per USCG Sector LA/LB, the tank is not leaking and the coast guard has contracted a third party vendor to remove the gas tank. As of 1756 hours, the SDO reports that per the Cal OES Santa Barbara County Territory Representative, the contractor is on-scene and has almost completed removing the barrels of fuel from the boat and the fuel from the boats fuel tank. USCG reports that the boat should be removed by tomorrow, 09/29/15.
- The Cal OES Southern Region ESC, and the Cal OES Santa Barbara County Territory Representative, in the absence of any health or environmental issues, will demobilize from the scene.

Cal OES Activation Status

- The Cal OES State Operations Center (SOC) transitioned to Joint Field Office (JFO) operations with FEMA to support recovery operations.

WEATHER

WEATHER SYNOPSIS BY REGION:

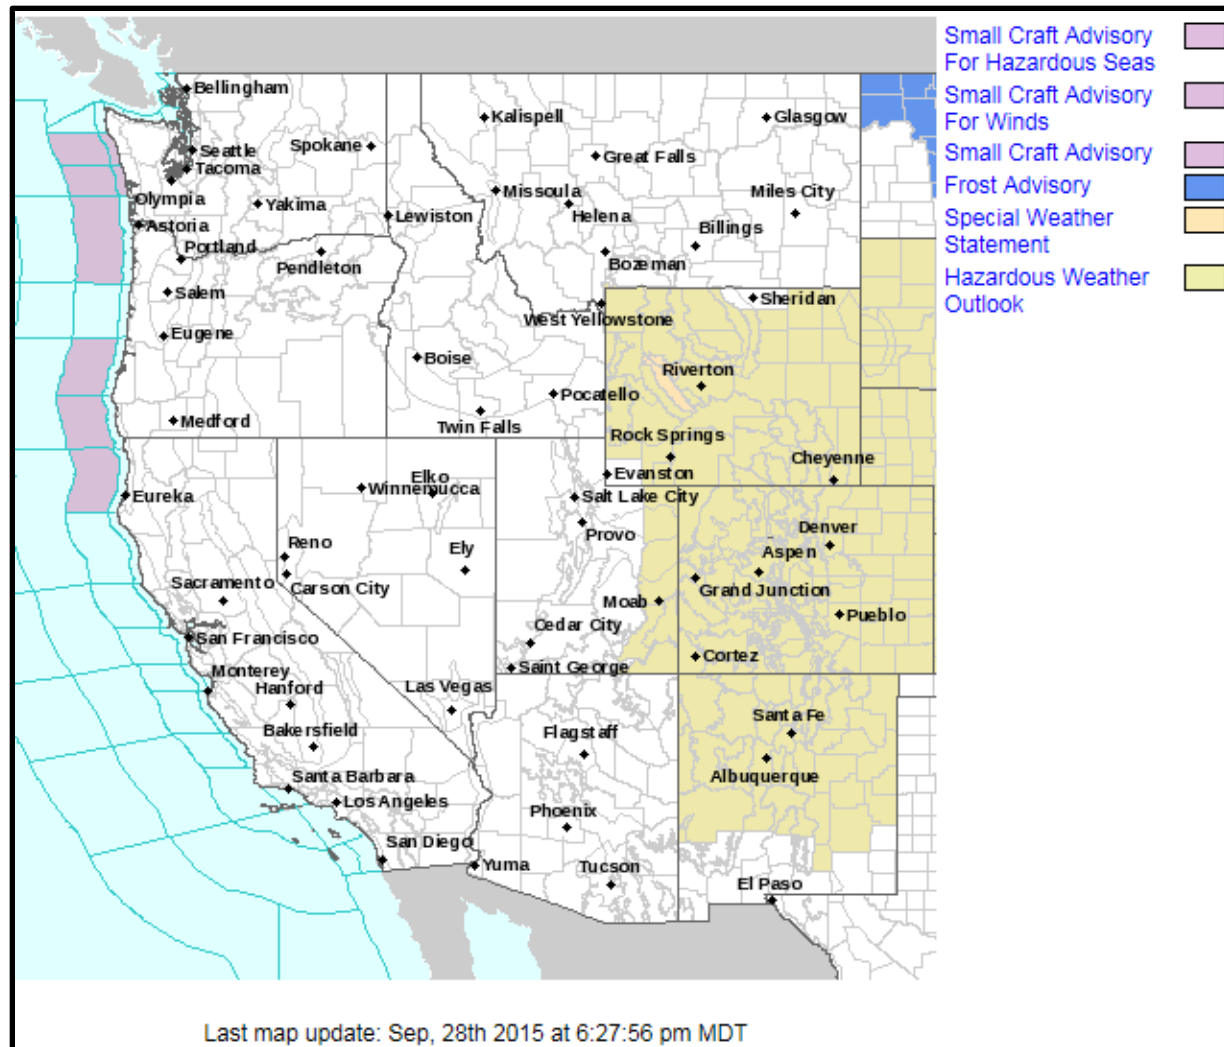

NORTHERN CALIFORNIA

Today's weather should be similar to Sunday's with dry and unseasonably warm daytime conditions in most areas. There will still be some high cloudiness streaming across the very southern portions of the Northern California area from circulation around a cutoff low well off the coast. The cutoff low will be moving slowly east this week for a gradual cooling trend towards seasonably warm afternoons across the region through midweek. Some increase in cloudiness will begin to show up over the rest of the Northern California area Tuesday as the low begins to drift eastward. The low will open up into a trough Wednesday and move ashore and inland Thursday with some high cloudiness and what may be the week's coolest temperatures those two days. Most of the Northern California area will not see any rain from the low/trough, but the best chance of anything significant appears to be near Tahoe but mostly southward of there Wednesday. Any other areas that might get rain will be most likely see amounts of no significance. Once the trough passes by, there is a lot of uncertainty about how the weather pattern for the weekend is going to develop. The possibilities are diametric opposites. One model solution has a strong ridge with very warm and dry conditions under off shore flow, the other model path brings a cooler low pressure system in from the north with a chance of rain.

SOUTHERN CALIFORNIA

An area of low pressure approaching the Northern California coast will bring a degree or two of cooling to much of the region each day through Wednesday. Maximum temperatures will be in the mid 70s to mid 80s across the mountains with mid 80s to mid 90s in the valleys today. Minimum humidity will be mainly in the teens above and inland from the marine layer, which will be around 1,000 feet deep, through Wednesday. Night and morning low clouds and fog will only move over the coastal areas. Westerly afternoon winds of 10 to 20 mph will surface across the desert passes through Wednesday. The low will open and move inland over the West Coast, cooling temperatures to near normal and causing minimum humidity to increase to 15% to 30% above the marine layer on Thursday. The marine layer will deepen and morning low clouds and fog will move part way into the coastal valleys. West winds across the desert passes will increase to 15 to 25 mph with gusts to 40 mph Thursday. A ridge of high pressure will build into California from the Pacific Ocean bringing a warming trend and causing minimum humidity to drop into the 8% to 15% range across most of the area Friday through this weekend. Local northeast to east winds of 10 to 20 mph with gusts to 35 mph will surface across the mountains and below the canyons and passes of Ventura and Los Angeles Counties Friday morning through Sunday morning.
